

ANDREA ORAMA CEDÓ

Software Engineer · QA & Automation Engineer · Product Support Engineer

+34 637 632 723 andrea.orama0@gmail.com linkedin.com/in/andreaorama

SUMMARY

Software Engineer focused on Product Support and Quality Assurance, with experience supporting API and AI-driven systems in production. Interned at Microsoft and Apple and co-authored published research on AI-generated content. Strong interest in debugging production issues, reproducing defects, and identifying root causes to improve system reliability, with a focus on validating features and shipping reliable products.

EDUCATION

MSc Artificial Intelligence Technical University of Madrid 09/2024 – Present	Madrid, Spain
BSc Software Engineering University of Puerto Rico 08/2018 – 05/2024	Mayagüez, Puerto Rico
Google Tech Exchange Completed Google's internal SWE curriculum equivalent Google 01/2023 – 05/2023	Remote

LANGUAGES

English (Native) Spanish (Native)

CERTIFICATION

A4Q Software Development Engineer in Test SDET Foundation Level Expected 2026
--

SKILLS

Programming Python, Java, SQL, JavaScript, Swift, Objective-C
Testing & QA API Testing, Test Automation, Test Planning, Defect Analysis, Debugging, UAT, Regression Testing, Test Case Design
AI & ML LLMs, NLP, Transformers, Prompt Engineering, Model Evaluation
Systems & Support Production Debugging, Performance Analysis, Issue Reproduction, API Integration, REST APIs
Tools Git, GitHub, GitLab Issues, Postman, CI/CD, Jupyter Notebook, Google Colab, PyTorch, TensorFlow

EXPERIENCE

Product Support Engineer Multiverse Computing 11/2025 – Present	Madrid, Spain
• Troubleshoot API and LLM-based systems in production environments, resolving integration and performance issues. • Reproduced and isolated defects using Python and Postman, providing actionable diagnostics to engineering teams. • Analyzed system performance and benchmarks to identify regressions and production issues. • Collaborated with QA and engineering to validate mobile features across 3 production releases, managing issues and bugs via GitLab Issues.	
Software Engineer Intern Microsoft 01/2024 – 05/2024	Remote
• Developed an AI-powered project planning tool using Semantic Kernel and LLMs. • Automated compliance checks in Azure DevOps, reducing manual effort by 30%. • Designed prompt engineering workflows to improve AI-driven decision processes. • Evaluated GPT models to optimize performance, accuracy, and output quality.	
QA Automation Engineer Intern Apple 05/2023 – 09/2023	San Diego, California
• Led test plan design for 30% of a production mobile application feature set as DRI. • Automated 50% of critical test cases using Swift and Objective-C, improving test efficiency by 25%. • Managed defect triage, assignment, and resolution using internal issue tracking tooling. • Developed internal testing tools to support targeted validation workflows for QA and engineering teams.	
Cyber Security R&D Intern GM Sectec 01/2022 – 06/2022	San Juan, Puerto Rico
• Performed API testing using Postman and developed user acceptance tests (UAT). • Researched and evaluated tools for integrating automated and manual testing workflows.	
Undergraduate Researcher Rochester Institute of Technology 06/2021 – 08/2021	Remote
• Co-authored an IRB-approved study with 30 participants on AI-generated vs. human-written content; designed GPT-3 prompts and analyzed credibility and bias. View paper
